## PREFACE

This report presents statistics on the number of inhabitants of the State, its counties, and minor civil divisions (townships, etc.). In addition, separate figures are also presented for urban places, wards of cities of 5,000 or more, and other areas of the State. These data are based upon tabulations from the Seventeenth Decennial Census of the population of the United States, its Territories, and possessions conducted as of April 1, 1950. Provision for the Seventeenth Decennial Census was made in the act providing for the Fifteenth and subsequent decennial censuses which was approved on June 18, 1929.

The major portion of the information compiled from the Census of Population of 1950 will appear in Volume I, *Number of Inhabitants*, and in Volume II, *Characteristics of the Population*. This report is a preprint of Chapter 2 (Alabama) of Volume I, which is to present, in a single publication, statistics on the number of inhabitants for each State.

The materials presented here will also appear as Chapter A of Part 2 (Alabama) of Volume II. Volume II will comprise a series of separately published parts, one for each State and a summary for the United States. The use of separate parts makes the basic materials on characteristics of the population for a given State available to the public in a single publication. Within the part for a State, Chapter A will recapitulate the statistics on the number and distribution of the population within a State; Chapter B will present statistics on the general characteristics of the population of the various political subdivisions of the State, such as counties, incorporated places, and the like; and Chapter C will present data on the detailed characteristics of the population of the larger areas within the State, such as cities of 100,000 inhabitants or more and standard metropolitan areas.

The materials presented here were prepared under the supervision of Howard G. Brunsmann, Chief, Population and Housing Division, and Dr. Henry S. Shryock, Jr., Assistant Chief for Population Statistics, by Dr. Henry D. Sheldon, Chief, Demographic Statistics Section, and Charles P. Brinkman, Chief, Population Distribution Unit; the compilation of the statistics was under the direction of Robert B. Voight, Assistant Chief for Operations. The collection of the information on which these statistics are based was under the supervision of Lowell T. Galt, Chief, Field Division. The geographic work, including the delineation of special types of urban territory and the preparation of maps, was under the supervision of Clarence E. Ratschelet, Chief, Geography Division.

## Number of Inhabitants

**The State.**—Alabama was organized as a Territory in 1817 from the eastern part of Mississippi Territory and was admitted to the Union in 1819 as the twenty-second State with boundaries as at present. Its population on April 1, 1950, according to the Seventeenth Census, was 3,061,743. The State has a land area of 51,078 square miles. In 1950 there was an average of 59.9 inhabitants per square mile as compared with an average of 55.5 in 1940. Among the States, Alabama ranked seventeenth in population and twenty-seventh in land area.

In 1820, the first year in which it was enumerated as a State, Alabama had a population of 127,901 (table 1). In 1950, 130 years later, the population was about 24 times as large. The rates of population growth, which had been rapid in the early years, slackened after 1840. By 1900, however, the population was 1,828,697, or 14 times as large as in 1820. Both the largest numerical increase and most rapid rate of growth in the twentieth century occurred between 1900 and 1910, when an increase of 309,396, or 16.9 percent, was recorded. The gain of 228,782 between 1940 and 1950 represented an increase of 8.1 percent over the 1940 population of 2,832,961.

**Usual place of residence.**—According to usual Census practice, which dates back to 1790, each person enumerated in the 1950 Census was counted as an inhabitant of his usual place of residence or usual place of abode, which is generally construed to mean the place where he lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile, although, in the vast majority of cases, these different bases of classification would be identical.

In the application of this rule, persons were not always counted as residents of the places in which they happened to be found by the census enumerators. Persons in places where guests usually pay for quarters (hotels, etc.) were enumerated on the night of April 11, and those whose usual place of residence was elsewhere were allocated to their homes. Visitors found staying in private homes, however, were not ordinarily interviewed there. Information on persons away from their usual place of residence was obtained from other members of their families, landladies, etc. If an entire family was expected to be away during the whole period of the enumeration, information on it was obtained from neighbors. A matching process was used to eliminate duplicate reports for persons who reported for themselves while away and were also reported by their families at home.

Persons in the armed forces quartered on military installations were enumerated as residents of the States, counties, and minor civil divisions in which their installations were located. Members of their families were enumerated where they actually resided. In the 1950 Census, college students living away from home were considered residents of the communities in which they were residing while attending college, rather than as persons temporarily absent from their parental homes as was the practice in 1940. In 1950 the crews of vessels of the American Merchant Marine in harbors of the United States were counted as part of the population of the ports in which their vessels were berthed on April 1,

1950. In 1940 such persons were treated as part of the population of the port from which the vessel operated. Inmates of institutions, who ordinarily live there for long periods of time, were counted as inhabitants of the place in which the institution was located; whereas patients in general hospitals, who ordinarily have short stays, were counted at, or allocated to, their homes. All persons without a usual place of residence were counted where they were enumerated.

**Urban and rural population.**—The 1950 urban population of Alabama comprised 1,340,937 persons, or 43.8 percent of the population of the State (table 1). The urban population was living in the 85 urban places in the State and in the urban-fringe areas of the Birmingham, Mobile, and Montgomery Urbanized Areas and in the Alabama part of the urban fringe of the Columbus, Ga., Urbanized Area. More than two-fifths of the urban population was in the central cities of the three urbanized areas entirely in the State (table 2).

The rural population of Alabama comprised 1,720,806 persons, or 56.2 percent of the population of the State (table 1). Of the rural population, 131,127 persons, or 7.6 percent, were living in the 66 incorporated and 18 unincorporated places of 1,000 to 2,500 inhabitants (table 2).

**Urban definition.**—Under the urban definition established for use in the 1950 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, towns,<sup>1</sup> and villages; (b) the densely settled urban fringe, including both incorporated and unincorporated areas, around cities of 50,000 or more; and (c) unincorporated places of 2,500 inhabitants or more outside any urban fringe. The remaining population is classified as rural. According to the urban definition used in previous censuses, the urban population comprises all persons living in incorporated places of 2,500 inhabitants or more and areas (usually minor civil divisions) classified as urban under special rules relating to population size and density.

In both definitions, the most important component of the urban territory is the group of incorporated places having 2,500 inhabitants or more. A definition of urban territory restricted to such places, however, would exclude a number of equally large and densely settled places, merely because they were not incorporated places. Under the old definition, an effort was made to avoid some of the more obvious omissions by the inclusion of the places urban under special rules. Even with these rules, however, many large and closely built-up places were excluded from the urban territory. To improve the situation in the 1950 Census, the Bureau of the Census set up, in advance of enumeration, boundaries for urban-fringe areas around cities of 50,000 or more and for unincorporated places outside urban fringes. All the population residing in urban-fringe areas and in unincorporated places of 2,500 or more is classified as urban according to the 1950 definition. (Of course, the incorporated places of 2,500 or more are urban in their own

<sup>1</sup> Except in New England, New York, and Wisconsin, where "towns" are minor civil divisions of counties and are not necessarily densely settled centers like the towns in other States.

right.) Consequently, the special rules of the old definition are no longer necessary.

According to the new urban definition, the 1950 urban population of Alabama consisted of the following components: (1) The 1,228,209 inhabitants of the 76 incorporated places of 2,500 inhabitants or more; (2) the 33,456 inhabitants of the 9 specially delineated unincorporated places of 2,500 inhabitants or more; and (3) 79,272 persons living in other territory in the urban-fringe areas of the Birmingham, Mobile, and Montgomery Urbanized Areas and in the Alabama part of the urban fringe of the Columbus, Ga., Urbanized Area. Since there were no places classified as urban under special rule in Alabama according to the old definition, the population of the first element comprised the urban population under the old definition. The population of the remaining elements—112,728—represents the gain in the urban population of Alabama which resulted from the change in definition.

Although the Bureau of the Census has employed other definitions in the course of its history, the statistics on the population by urban and rural residence for the years 1800 to 1940 are shown in accordance with the 1940 definition. The 1950 statistics are shown in accordance with both the new and old definitions.

**Trends of urban and rural population.**—Trends in the urban and rural population can be examined only on the basis of the old definition. On this basis, the urban population rose from 216,714 in 1900 to 1,228,209 in 1950 (table 1). More than one-third of the increase over the 50-year period came between 1940 and 1950, when the largest numerical increase in the history of the State was recorded. The gain of 372,268 for the decade represented an increase of 43.5 percent over the 1940 urban population of 855,941. All 20 cities of 10,000 inhabitants or more in the State shared in the growth of the urban population between 1940 and 1950, with the rates of increase ranging from 12.6 percent for Fairfield to 212.5 percent for Prichard (table 4). In 1900 there was no city in Alabama with as many as 50,000 inhabitants; by 1950 the four cities of this size had a combined population of 617,296, or one-fifth of the population of the State (table 3). The proportion of the population of the State living in urban territory more than tripled over the 50-year period, rising from 11.9 to 40.1 percent.

Despite a decline of 143,486 between 1940 and 1950, the rural population of Alabama increased from 1,611,983 in 1900 to 1,833,534 in 1950 (table 1). The decline, the first in the history of the State, represented a loss of 7.3 percent from the 1940 rural population of 1,977,020. The decennial rates of gain for the rural population in the first four decades of the twentieth century were considerably below those for the urban population for the corresponding decades. As a result, the proportion of the population of Alabama living in rural territory dropped from 88.1 to 59.9 percent over the 50-year period.

**Counties.**—The 67 counties in Alabama ranged in size from Coosa with a population of 11,776 to Jefferson with a population of 558,928 (table 5). Between 1940 and 1950, 23 of the counties increased in population as against 48 in the previous decade. The most rapid rate of increase between 1940 and 1950 was recorded for Mobile County, which gained at the rate of 62.8 percent. As in the previous decade, the largest numerical increases were experienced in Jefferson and Mobile, the most populous counties in the State, which had increases of 98,998 and 89,131, respectively. The gains of these two counties accounted for more than four-fifths of the population increase for the State between 1940 and 1950.

**Minor civil divisions.**—To the primary political divisions into which counties are divided, the Bureau of the Census applies the general term "minor civil divisions." The minor civil divisions in Alabama are the election precincts except for the city of Mobile, which is independent of any precinct organization. The incorporated cities (except Mobile) and towns form subdivisions of the election precincts in which they are located.

Table 6 shows statistics on the population of each county by minor civil divisions for the last three censuses. The population of each city (except Mobile) and town is shown in *italics* under the population of the minor civil division in which it is located. When an incorporated place or unincorporated place lies in two or more minor civil divisions, the population of the several parts is shown in table 6 in the appropriate minor civil divisions, and each part is designated by "part." Figures on the total population of such places are given in table 7. Unincorporated places are designated by "uninc." Changes between the 1940 Census and the 1950 Census in the boundaries of areas listed are shown in notes to table 6. For changes in boundaries prior to the 1940 Census, see reports of the Sixteenth Census (1940), *Population*, Vol. I, pp. 72-79, and reports of earlier censuses.

**Incorporated and unincorporated places.**—There were 306 places in Alabama in 1950 incorporated as cities or towns and 27 unincorporated places of 1,000 inhabitants or more. The 230 incorporated places of fewer than 2,500 inhabitants accounted for 182,344 of the 1,410,553 persons living in incorporated places. There were 61,672 persons living in the unincorporated places, 28,216 of whom were in the 18 places of fewer than 2,500 inhabitants. The incorporated places ranged in size from Stroud town with a population of 79 to Birmingham city with a population of 326,037.

Political units recognized as incorporated places in the 1950 Census are those which are incorporated as cities, boroughs, towns, and villages, with the exception that towns are not recognized as incorporated places in the New England States, New York, and Wisconsin.

The Bureau of the Census has delineated boundaries for the thickly settled urban fringe around cities of 50,000 or more and has also delineated boundaries for unincorporated places of 1,000 or more which are densely settled population centers without corporate limits. Although there are unincorporated places within the urban fringe, it was not feasible to establish boundaries for such places, and therefore they are not identified as separate places.

The count of urban places in the 1950 Census comprises all incorporated places of 2,500 or more regardless of location and unincorporated places of 2,500 or more which are located outside the urban-fringe areas. Incorporated places of less than 2,500 which lie in the urban fringe are not recognized as urban places.

**Urbanized areas.**—There were three urbanized areas—the Birmingham, Mobile, and Montgomery Urbanized Areas—entirely within Alabama and one—the Columbus, Ga., Urbanized Area—partially within the State. Of the 761,050 persons in Alabama living in urbanized areas, 561,571 were in the three central cities in the State and 199,479 were in the urban-fringe areas. The urban-fringe areas had 125,076 persons in 12 incorporated places and 74,403 in the unincorporated parts (tables 2 and 9).

Each urbanized area contains at least one city with 50,000 inhabitants or more in 1940 or according to a special census taken since 1940, and some urbanized areas contain two or more cities of 50,000. Each urbanized area also includes the surrounding closely settled incorporated places and unincorporated areas that meet the criteria listed in the section below on "Urban fringe." Thus, the territory of an urbanized area may be classified into incorporated parts and unincorporated parts. (See urbanized area maps.)

An urbanized area also may be divided into central city or cities and urban fringe as defined below.

**Central cities.**—Although an urbanized area may contain more than one city of 50,000 or more, not all cities of this size are necessarily central cities. The largest city of an area is always a central city. In addition, the second and third most populous cities in the area may qualify as central cities provided they have a population of at least one-third of that of the largest city in the area and a minimum of 25,000 inhabitants. The names of the individual urbanized areas indicate the central cities of the areas.

**Urban fringe.**—The urban fringe includes that part of the urbanized area which is outside the central city or cities. The following types of areas are embraced if they are contiguous to the central city or cities or if they are contiguous to any area already included in the urban fringe:

1. Incorporated places with 2,500 inhabitants or more in 1940 or at a subsequent special census conducted prior to 1950.

2. Incorporated places with fewer than 2,500 inhabitants containing an area with a concentration of 100 dwelling units or more with a density in this concentration of 500 units or more per square mile. This density represents approximately 2,000 persons per square mile and normally is the minimum found associated with a closely spaced street pattern.

3. Unincorporated territory with at least 500 dwelling units per square mile.

4. Territory devoted to commercial, industrial, transportation, recreational, and other purposes functionally related to the central city.

Also included are outlying noncontiguous areas with the required dwelling unit density located within  $1\frac{1}{2}$  miles of the main contiguous urbanized part, measured along the shortest connecting highway, and other outlying areas within one-half mile of such noncontiguous areas which meet the minimum residential density rule.

<sup>1</sup> According to the new urban definition, the urban population comprises persons residing in urban territory but not necessarily in an urban place, which is defined as an incorporated place of 2,500 or more, or an unincorporated place of 2,500 or more located outside an urbanized area. Under the old definition, incorporated places of 2,500 or more and places urban under special rule are classified as urban places. There were no places urban under special rule in Alabama.

<sup>2</sup> Includes 79,272 persons in urban territory outside of urban places.

<sup>3</sup> Population of that part of Mississippi Territory as then constituted taken to form Alabama Territory in 1817.

## URBANIZED AREA MAPS

The Birmingham, Mobile, and Montgomery Urbanized Areas, for which statistics are shown in table 9, are depicted in the following maps. The shaded areas, in combination, comprise the urbanized areas. To assist in locating the exact external boundaries of the

areas, each boundary feature (street segment, political boundary, or other), has been assigned a number. The boundary segments thus numbered are shown on the map and the features to which they apply are presented in the following key.
